

Setting up files and folders

Level

Beginners: Kids who are just starting out.

Yellow difficulty level.

Time

15 to 30 minutes

Challenge

Create a folder for Dojo files and be able to access files in the folder and save files to the folder.

Copy the file-extensions.htm file to this folder.

Ask a mentor for a sample file if necessary

Progression

View file extensions: if you cannot see the .html part of a file name can you find out how to make it visible in the list of file names?

Edit the supplied file to list common file extensions (this reinforces our knowledge of list markup and table markup)

Aims

Make sure everyone knows where their Dojo files are and can save files to that location.

Make sure everyone understands what a file extension is and can view file extensions.

Reinforce knowledge of list and table markup.

Resources

file-extensions.html file.
