

Following the crumbs

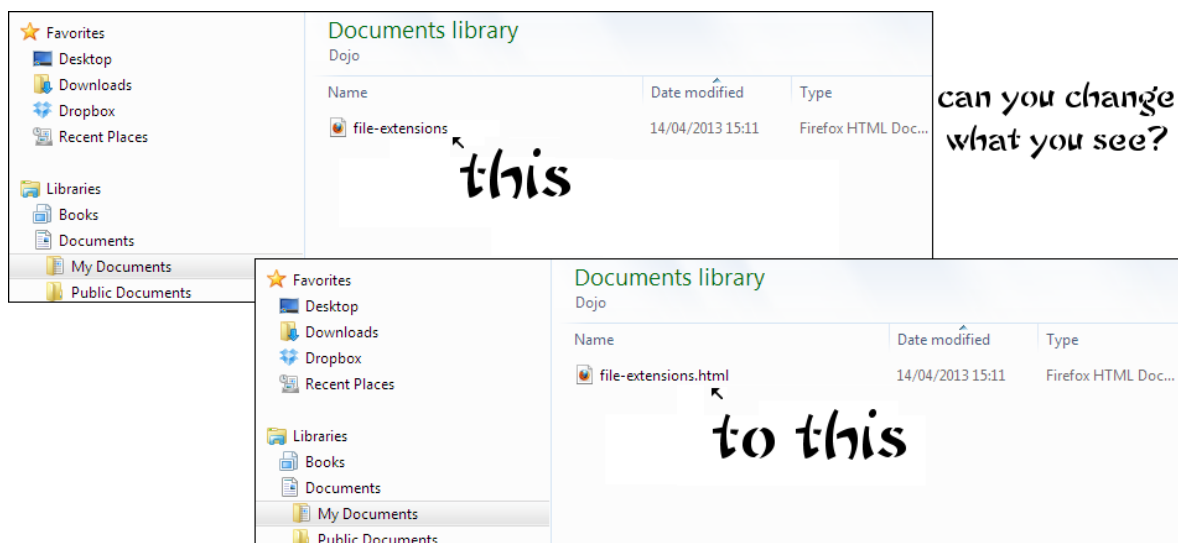

This challenge is to make sure you can find your files.

- Do you know what a file is?
- Do you know what a folder is?
- Do you know how to make a folder on your PC or Mac?
- Once you made it, can you find it?
- (Oh ... and what's a **file extension**?)

Your challenge!

1. Create a folder on your machine your for Dojo files
2. Write down where it is — for example —
`C:\Users\Shrek\Documents\Dojo_files`
3. Now get the file-extensions.html file (your mentor will tell you where to find it) and copy it to the Dojo files folder
4. Write down the full path to copied file. For example —
`C:\Users\Shrek\Documents\Dojo_files\file-extensions.html`
5. Can you see the whole of the file name in the folder?

Feeling brave?

Give the *path* to the Ninja sitting next to you.

Can they find it on your machine?

Take the `file-extensions.html` file and edit it so that it has a list of file extensions and what they stand for

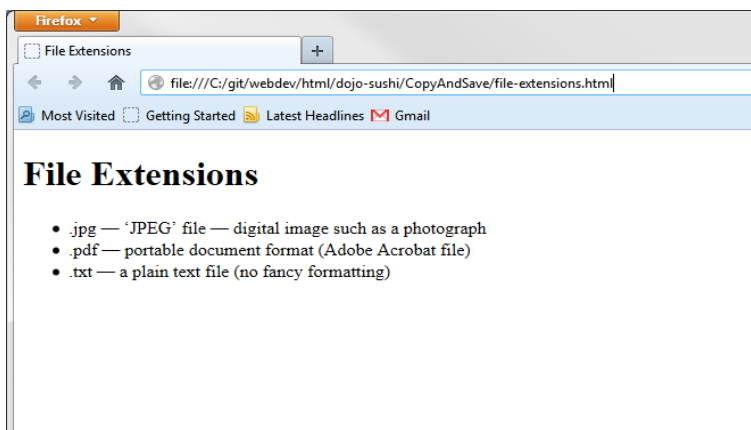

For example:

`.jpg` — 'JPEG' file — digital image such as a photograph

`.pdf` — portable document format (Adobe Acrobat file)

`.txt` — a plain text file (no fancy formatting)

Can you make it look like this?

Or even like this?
