

Planet Dojo

Can you add the stylesheets to the webpages?

Your challenge!

1. Copy the PlanetDojo folder into your Dojo files folder.

2. Open the mars.html file in your editor and in your browser.

Can you see the picture of Mars as the page background?

3. Now open the other files.

You'll see that the pictures are missing.

4. Can you fix this by:

- adding the references to the stylesheet in the HTML files (use mars.html as the example)
- add the **selector** for Venus in the stylesheet

Feeling brave?

1. Change the paths to the images in the stylesheet so they point to the files in the images folder rather than web resources.

2. Create a Home page that has links to all the planets. Use the planetdojo.jpg image as the background.
